Discerning the True Nature of Reality

Within ourselves is a desire to learn of life and its origin. Science and Religion have long debated these subjects further fueling the argument between Evolutionists and Creationists. By using a concordance approach, hypotheses and theories of controversial topics are compared to bring clarification to the debate.

To better understand these topics, the reader is taught simple "cause and effect" logic allowing anyone to become an explorer of space and time in more easily understood laymen terms.

Examine the first moment of creation whether you know it as the Big Bang or Genesis to learn what existed before time began. Discover why Science can't account for the majority of physical material in the Universe referred to as "Dark Matter".

Study details in nature, physics and the human condition called mankind that's of keen interest to everyone. While reading, you'll be amazed by the wonder of the infinite Universe and your place in it.

The author has taken great care to create a non-fiction literary work free of opinion and denomination. The thought provoking information within will make your hair stand on end as you realize mankind's perception of reality may be hiding the true nature of our existence.
